

**MHS GENESIS is the modernized electronic health record managed by the DoD Healthcare Management System Modernization program management office under the Program Executive Office, Defense Healthcare Management Systems.**

## WHAT IS MHS GENESIS?

MHS GENESIS integrates inpatient and outpatient best-of-suite solutions that connect medical and dental information across the continuum of care, from point of injury to the military treatment facility. MHS GENESIS replaces select Department of Defense legacy health care systems, including but not limited to: AHLTA, the Composite Health Care System, inpatient and components of the Theater Medical Information Program-Joint portfolio.

MHS GENESIS supports the availability of electronic health records for more than 9.6 million DOD, U.S. Coast Guard and Department of Veterans Affairs beneficiaries and approximately 206,000 Military Health System personnel globally. It enables the application of standardized workflows as well as integrated health care delivery and data standards for the improved and secure electronic exchange of medical and patient data. MHS GENESIS is deploying via a wave model that began in the Pacific Northwest and continues to deploy at CONUS and OCONUS Military Treatment Facilities. Full deployment of MHS GENESIS remains on schedule.

ONE RECORD

RELIABILITY

HIGH QUALITY  
HEALTH CARE DELIVERY

IMPROVED  
USABILITY

EMERGING  
TECHNOLOGY

## FEATURES

- Helps health care delivery teams provide the patient what they need, when and where they need it
- Connects the provider to the patient and is integral in the provision and coordination of safe, quality care.
- Brings together inpatient and outpatient solutions that connect medical and dental information whether on the battlefield or at home in a military hospital
- Patient Portal in a secure website with 24/7 access to health care information including management of appointments and exchange of messages with the health care team anytime and anywhere

## BENEFITS

- Integrated medical and dental record throughout the continuum of care
- Monitors a beneficiary's health status through greater population health data, tracking, and alerting capabilities
- Improves the ability to monitor patient safety, outcomes, and operational and medical readiness
- Improves data access and sharing of health information across the spectrum of military operations, the VA, and civilian health care organizations
- Increases accessibility of integrated, evidence-based health care delivery and decision-making
