# Standing Order for Administering Meningococcal ACWY Vaccine (Pediatric)

**Purpose:** To reduce morbidity and mortality from meningococcal disease by vaccinating all individuals who meet the criteria established by the Centers for Disease Control and Prevention's Advisory Committee on Immunization Practices (ACIP), the Food and Drug Administration (FDA) product labeling, and the Department of Defense (DOD).

**Policy:** Under this standing order, eligible health care professionals working within their scope of practice may vaccinate patients who meet the criteria below.

## Procedure:

- Identify individuals 2 months 18 years of age in need of vaccination against meningococcal serogroups A, C, W, and Y based on the following criteria:
  - No documented receipt of a complete routine series of meningococcal ACWY vaccine (MenACWY) at the appropriate ages and intervals.
  - At increased risk due to:
    - Asplenia (anatomic or functional) or sickle cell disease (SCD)
    - HIV infection
    - Men who have sex with men (MSM)
    - Meningococcal outbreaks
    - Microbiologists routinely exposed to Neisseria meningitidis
    - Military recruits
    - Persistent (e.g., genetic) complement deficiency or using a complement inhibitor medication
    - Travel to or living in countries where meningococcal disease is hyperendemic or epidemic
    - Unvaccinated or undervaccinated 1st year college students living in residence halls
- 2. Using DD Form 3110, screen all patients for contraindications and precautions to MenACWY:

# Contraindications:

- History of a serious reaction (e.g., anaphylaxis) after a previous dose of meningococcal vaccine or to a vaccine component
- MenACWY-CRM (Menveo): severe allergic reaction to a diphtheria toxoid—or CRM197—containing vaccine
- MenACWY-TT (MenQuadfi) and MenABCWY (Penbraya): severe allergic reaction to a tetanus toxoid-containing vaccine
- Penbraya: severe allergic reaction to yeast
- For information on vaccine components, refer to the package inserts for MenQuadfi, Menveo, and Penbraya, and The CDC Pink Book Appendix B.

# **Precautions:**

- Moderate or severe acute illness with or without fever
- Menveo: preterm birth if < 9 months of age</li>
- For questions or concerns, consider consulting the DHA Immunization Healthcare Support Center at (877) 438-8222, Option 1 or DSN 312-761-4245.

## **Special Populations:**

Pregnancy and lactation: Pregnant and lactating women should receive MenACWY if indicated.

3. Provide all patients (or their parent/legal representative) with a copy of the most current federal <u>Vaccine Information Statement (VIS)</u>. You must document, in the patient's medical record, the publication date of the VIS and the date it was given to the patient (parent/legal representative). Provide non-English speaking patients with a copy of the VIS in their native language, if available and preferred.

## 4. Provide MenACWY as follows:

- Administer the appropriate vaccine intramuscularly (IM) according to Tables 1 3.
- Off-label ACIP recommendations covered under this standing order:
  - A 2-dose primary series for individuals ≥ 2 years of age at increased risk
  - Booster doses administered at an interval of < 4 years</li>
  - Booster doses administered to individuals < 15 years of age</li>
  - Repeated booster doses for individuals who remain at increased risk
- MenACWY vaccines are interchangeable; the same product is recommended, but not required, for all doses (primary and booster).
- Meningococcal B vaccine (MenB) products (monovalent or pentavalent) are not interchangeable; all primary and booster doses must be from the same manufacturer.
- MenACWY and MenB may be administered simultaneously (at different anatomic sites) if indicated.
- Penbraya may be used for both primary and booster doses only when both MenACWY and MenB vaccines are indicated at the same visit. Otherwise, MenACWY and MenB vaccines should be given separately as appropriate. Consult the age appropriate MenACWY and MenB standing orders for indications, dosing, and intervals.
- Vaccination of healthy individuals with meningococcal B-containing vaccines is based on shared clinical decision-making (SCDM) and is not covered under this standing order. These individuals must obtain a written order from a privileged provider.

TABLE 1. Current Meningococcal ACWY Vaccines						
	MenQuadfi (MenACYW-TT)	Menveo / 1-vial (MenACWY-CRM)	Menveo / 2-vial (MenACWY-CRM)	Penbraya (MenABCWY)		
Age	≥ 2 years	10 - 55 years	2 mo - 55 years	10 - 25 years		
Dilute	No: single-dose vial	No: single-dose vial (pink cap)	Yes: MenA vial (orange cap) & MenCWY vial (gray cap)	Yes: MenACWY vial & MenB syringe		

TABLE 2. IM Needle Length and Injection Site Guide						
Use a 22 – 25-gauge needle. Choose needle gauge and length appropriate to the patient's age						
Patient Age	Needle Length	Injection Site				
Infants (1-12 months)	1 inch (25 mm)	Anterolateral thigh				
Toddlore (1.2 years)	1-1.25 inch (25-32 mm)	Anterolateral thigh*				
Toddlers (1-2 years)	5/8†-1 inch (16-25 mm)	Deltoid muscle of arm				
Children (2.10 years)	5/8†-1 inch (16-25 mm)	Deltoid muscle of arm*				
Children (3-10 years)	1-1.25 inches (25-32 mm)	Anterolateral thigh				
Children/Adalascents (11 19 vecrs)	5/8†-1 inch (16-25 mm)	Deltoid muscle of arm*				
Children/Adolescents (11-18 years)	1-1.5 inches (25-38 mm)	Anterolateral thigh

<sup>\*</sup> Preferred site

<sup>†</sup> If skin is stretched tightly and subcutaneous tissues are not bunched.

TABLE 3: MenACWY Vaccine Schedule by Patient Age and Risk Factor, Pediatric 2 months – 18 years							
Age Group	Risk Factor	Primary series: MenACWY-CRM (Menveo), MenACWY-TT (MenQuadfi), or MenABCWY (Penbraya)*	MenACWY Booster dose*				
Individuals who are otherwise healthy:							
10 - 18 years	1st year     college living in     residence halls	<ul> <li>Did not receive a dose on/after 16th birthday, within 5 years of college entry, or received only 1 dose before 16th birthday:</li> <li>Menveo or MenQuadfi: single dose</li> </ul>	Not recommended unless risk increased due to another indication				
	Military recruit	Menveo or MenQuadfi: single dose	Every 5 years     based on exposure     risk				
11 - 18 years	None (routine schedule)	<ul> <li>1st dose at 11-15 years (recommended at 11-12):         <ul> <li>Menveo or MenQuadfi: 1 dose plus booster</li> </ul> </li> <li>1st dose at 16-18 years:         <ul> <li>Menveo or MenQuadfi: 1 dose, no booster</li> </ul> </li> </ul>	At age 16 years (minimum interval 8 weeks)				
		<ul> <li>Age 16-18 only, when SCDM favors administration of MenB also (requires individual written order):</li> <li>Penbraya: 2 doses at 0 &amp; 6 months*</li> </ul>	Not recommended unless risk increased due to another indication				
Individuals with underlying medical conditions or additional risk factors:							
2 - 23 months	Asplenia/SCD     Complement deficiency     HIV     Outbreak     Travel	<ul> <li>Menveo - if first dose at age:         <ul> <li>2 months: 4 doses at 2, 4, 6, &amp; 12 months</li> <li>3–6 months: See catch-up schedule†</li> <li>7–23 months: 2 doses (second dose ≥ 12 wks after first dose AND after the 1st birthday)</li> </ul> </li> <li>MenQuadfi: Not recommended</li> </ul>	N/A				
	Asplenia/SCD     Complement deficiency     HIV	Menveo or MenQuadfi: 2 doses ≥ 8 wks apart	Age < 7 years:     Single dose 3     years after primary     vaccination and     every 5 years     thereafter				
2 - 9 years	Outbreak    Travel	Menveo or MenQuadfi: single dose	Age ≥ 7 years:     Single dose 5     years after primary     vaccination and     every 5 years     thereafter				
10 - 18 years	Asplenia/SCD     Complement deficiency	<ul> <li>Menveo or MenQuadfi: 2 doses ≥ 8 wks apart</li> <li>Penbraya: 2 doses at 0 &amp; 6 months*</li> </ul>	Single dose 5     years after primary     vaccination and     every 5 years				
	HIV     Microbiologist	<ul> <li>Menveo or MenQuadfi: 2 doses ≥ 8 wks apart</li> <li>Menveo or MenQuadfi: single dose</li> </ul>					
	<ul><li>Microbiologist</li><li>Outbreak</li></ul>	Penbraya: 2 doses at 0 & 6 months*	thereafter				
	Travel	<ul> <li>Menveo or MenQuadfi: single dose</li> </ul>					

Adapted from the CDC General Best Practice Guidelines: <a href="https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/index.html">https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/index.html</a>.

\*Penbraya may be used for both primary and booster doses only when both MenACWY and MenB vaccines are indicated at the same visit. Otherwise, MenACWY and MenB vaccines should be given separately as appropriate. Consult the age appropriate MenACWY and MenB standing orders for indications, dosing, and intervals. †Dose 1 at age 3–6 months: 3- or 4- dose series (dose 2 [and dose 3 if applicable] ≥ 8 weeks after previous dose until a dose is received at age ≥ 7 months, followed by an additional dose ≥ 12 weeks later AND after age 12 months).
