Laboratory Ancillary and CADRE Summary Table for the MHS Mart (M2)

<u>General</u>: Summary tables in the M2 share several common characteristics, equally applicable to the Laboratory Ancillary and CADRE Summary Table:

- They are refreshed (recalculated) within the M2 whenever the underlying detail table is refreshed. They are not themselves fed from an external system. This means that the Laboratory Ancillary and CADRE Summary Table should be refreshed at the same time that the Laboratory CADRE and Laboratory Ancillary detail table(s) is refreshed.
- Certain fields are forced to common names, values, and formats to facilitate linking to other summary tables. Where the detail table(s) does not use the common value or format for one of these fields, a calculated field must be created.
- Where the detail table contains calculated hierarchical or linked fields, the summary table should also.
- Even if the detail data are stored in more than one table (such as fiscal years), the summary table will be comprehensive for all the detail data. This means the Laboratory Ancillary and CADRE summary table will include Ancillary-processor data for Fiscal Years 2005 to 2012 and CADRE-processor data for Fiscal Years 2013 to subsequent years for which Laboratory Ancillaries are stored in the M2.
- Both the Ancillary-processor and CADRE-processor produced detail tables contain the elements required to create the Laboratory Ancillary and CADRE summary table. The transformation rules apply to all detail tables (regardless of source) unless indicated by specific business rule.
- M2 will create a flag variable that indicates which detail table contributed to the data
 in the summary table. For fiscal years 2012 and earlier, the Ancillary detail table should
 be the source and for fiscal years 2013 and later, the CADRE detail table should be the
 source, unless otherwise indicated by the flag variable.
